

vzmigrate: fixing "quota is running, stop it first" error

When migrating a Virtuozzo VPS from one node to another using `vzmigrate` one might receive this error message:

```
# vz migrate --keep-dst --remove-area no 192.168.0.1 1001
root@192.168.0.1's password:
Connection to destination HN (192.168.0.1) is successfully established
Moving/copying VE#1001 -> VE#1001, [], [] ...
destination '/vz/root/1001' for VE#1001 already exists
destination '/vz/private/1001' for VE#1001 already exists
Syncing private area '/vz/private/1001'
| 100% |***** done
Can't move/copy VE#1001 -> VE#1001, [], [] : Starting VE ...
Setting quota ...
vzquota: Running vzquota init failed for VE#1001.
vzquota : (error) Quota is already running for VE#1001, stop it first.
```

Fixing this involves a little handwork on the destination hardware node.

- Check using `'vzlist'` if a VPS #1001 exists (should not)
- Check if directory `/vz/root/1001` exists and remove it

Check if directory `/vz/private/1001` exists and rename it to `/vz/private/1001.migrated` (deleting the directory is fine too)

In case you did not run `'vzmigrate'` with `'--keep-dst'` argument, step #3 may be omitted as this directory shouldn't exist then.

- Disable the quota: `'vzquota of 1001 -f'` (yes, it will complain, but that's ok)
- Try again migrating your VPS to the new node

As always YMMV. It worked for me when running `'vzmigrate'` just as shown above. To be honest: This particular error happened only twice for some 50 or 60 VPS's migrated and was likely caused by network timeouts.
